

Earth is the planet where **air** plays a role in keeping us active and perfectly whole.

Most creatures live in the **water**, it's true. Conserving it daily is easy to do.

All types of **soil** must be treated with care -it's good for the colorful plants everywhere.

Take in the **beauty** of what's all around and cherish your world, from the sky to the ground.

And now the world gets it.
